## PROFESSIONAL SUMMARY

Computer Technician and Software Engineering student at UEPA, focusing on Web Development and Artificial Intelligence. Experienced in technologies such as Python/Django, React Native/JS, Machine Learning, image processing, and computer vision. I am a dedicated, hardworking, and patient person with good communication and writing skills, a quick learner, and I am curious and always strive to do my best.

## TECHNICAL ABILITIES

Back-End Development (Python, Django, Flask, FastAPI, Java, C#), Full Stack Web Development (React.js, Next.js, Node.js, Express.js), Mobile Development (React Native), Databases (MySQL, PostgreSQL, SQL Server, MongoDB, Firebase), Software Testing, Agile Methodologies, Docker, Git and GitHub, Celery, Redis, RabbitMQ, Kafka, Artificial Intelligence focused on Computer Vision and Image Processing, Design Thinking.

## ACADEMIC TRAINING

| Full Stack Development Internship, focusing on Back-End (Python, Django, FastAPI) and Front-End with Next.js. Creation and maintenance of REST APIs with a focus on performance and scalability, writing automated tests and API documentation, increasing system reliability. Use of Docker and Agile methodologies (Scrum). Implementation of multi-tenant architecture and system integration. Development of asynchronous routines with Celery and messaging with RabbitMQ/Apache Kafka, working on identifying and resolving inconsistencies in the data pipeline, eliminating duplications and ensuring integrity in persistence operations. Use of Docker and Agile methodologies (Scrum). |                                |
| <b>Researcher, State University of Pará</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Set. 2024 – Set. 2025</b>   |
| Creation of artificial intelligence models for manipulating Pap smear images to identify cervical cancer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                |
| <b>Computer Science Internship, UEPA – Vigia de Nazaré</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Mar. 2019 – Mai. 2019</b>   |
